General Comment

Generative AI is a dead-end technology with no clear use case. It is not fit for any of its stated purposes, but produces a close enough facsimile of something useful that the grifters propping it up have been able to keep stringing investors along and foisting it on the rest of us.

If this technology had any value beyond propping up a speculative bubble, its boosters would have enough money for compensating the authors and creators whose work they claim is integral for the utopian vision of the future they promise.

OpenAI says they cannot make their product work unless they are allowed to steal our labor. The truth is they can't make it work period, and the truth is also that their "need" to steal our work does not entitle them to take it.

If our work has value, they must pay to use it. If it does not, they don't need to steal it. It's that simple.
