As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-zymu-15ml
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6234

Comment on FR Doc # 2025-02305

Submitter Information

Name: Megan Giddings

Email: [REDACTED]

General Comment

Artificial intelligence, a misnomer for a basic prediction machine that routinely uses faulty data, will hinder American ingenuity, creativity, and innovation in the long term. It is also a waste of resources such as water and even space (the dedication of land to server farms for example) for a fad technology. It's already been shown that one of the supposed pioneers of AI, Microsoft, is backing out on agreements to build a more robust infrastructure around this because of how costly and wasteful it will be.

People who cannot do basic tasks such as composing an email, nominal research, demonstrate an amount of literacy to understand a text rather than get a sixty percent wrong summary and overrely on it, that lack the basic skills of composition to create art, or to even build their own code and instead must rely on AI are a hindrance to our workforce, not innovators.

AI also overrelies on stolen labor without compensation.
