General Comment

Protections for copyright holders absolutely **must** be included in an AI action plan. As an author, having my work fed to AI harms my copyright and my profits. The way most AI is trained is, at bottom, though stealing research and creative work from its rightful owners and feeding it into a machine, without any consent by the people whose work is being used. Writers, researchers, and artists **must** be asked for consent and compensated before their work is used to train AI. AI companies should not be able to circumvent issues of copyright, for if they do, undermines others ability to make a living from work that they have spent years, sometimes decades, creating. For that matter, **publishing companies** feeding their authors' works into AI without notice to, consent of, and payment to their authors is flagrantly unethical. I urge the federal government to protect the work of authors and researchers by creating clear and rigorous rules and guidelines that adhere to current copyright law and require notice and payment for using someone's work to train AI.
