General Comment

AI is overhyped and dangerous to the livelihoods of US creatives of all kinds.

It plagiarizes material illegally in ways that any citizen would be prosecuted for.

The US government should not involve itself with unproven technology such as AI.

The data privacy concerns are vast and open to government to serious privacy and legal liability for the inevitable breaches.

No one wants this.

The only people excited about this are the parasite billionaire class who see it as a way to churn out slop content without paying humans. All outputs from an AI system will need to be checked by a human for accuracy, which will take just as much time as just paying a human to do the work.

AI is subject to corruption of data and due to the nature of the "black box" functionality, end users will have no idea that the output is inaccurate.

There is simply no reasonable case to be made to vouch for a system that is fundamentally flawed and ethically repugnant.

No AI company has yet turned a profit and many are on life support without infusions of venture capital. The US government should not get involved in this dangerous fad.
