General Comment

Every citizen of the United States should be protected by copyright law. If AI is trained on artists' work without their consent, that is already unacceptable and inappropriate. Others should not be able to profit from AI work generated from these sources.

I'd also like to add that AI doesn't really add anything new, innovative, or meaningful to the "art" it creates like a human would. A human inspired by art creates something new from it by referencing other techniques--and real life!--and adding their own style. AI just mixes up existing references and mashes them together. It dilutes rather than adding and innovating. You can often tell where the art was taken from. This isn't how we should be getting our art and it is not a replacement for an artist. You can't just take a bunch of art, put it in a blender, spit it back up and call it original. It is not the same thing. Something new must be added for it to be original. That is what makes it art. That's why AI is useful as a brainstorming tool, but not a final work.
