Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6266

Comment on FR Doc # 2025-02305

Submitter Information

Name: James Brooks

General Comment

This is absurd and ridiculous to even consider moving forward, besides having nothing to do with national security. All this aims to do is try to allow companies which have been hemorrhaging obscene amounts of money to simply steal anything and everything they can scrape for a novel technology with no real applications. The widescale backlash of public opinion on these increasingly intrusive "A.I." technologies alone is abysmal, not to mention the absurd strain it puts on power grids, the dangers to the environment and strain on precious natural resources. All you'd be doing is enabling theft and giving protection to those who cannot be trusted with any information they'd try to glean from it. Do not give these short-sighted grifters anything, let them eat their losses for their terrible ideas and let them make their own creations instead of stealing and poorly synthesizing the hard work of millions of others.
