General Comment

Generative artificial intelligence (genAI) requires the unauthorized use of intellectual property in order to function, because the licensing fees for all the work that genAI's proponents say is necessary would be an onerous burden. It is not the responsibility of the United States government to support the theft of intellectual property of tens of thousands of creative workers in order to keep afloat the ill-advised schemes of a diminished few. It is a genie that cannot be put back in the bottle. Generative AI should be allowed to fail because it is a pyramid scheme, and because supporting the economic engine of American creative workers will be better for our economy than letting a half dozen venture capitalists hoard wealth with a license to steal.
