General Comment

In a country where labour equals pay, it is both unwise and unfair for anyone and anything to be able to steal the work of others unasked and unpaid. It is unnecessary to our growth of our country and will cost money that we do not have.

There is no worth in committing to this end of tech. It would not help the American people. If anything this is a cash grab by a sector of our country that regularly layoffs workers to match the unmet promises to their investors.

There is no proof provided that this will do anything, but harm the public and the trade in our country will even more be burdened by the thievery of those who already have so much.

I love science and math.

I imagine such tech wonders our future could hold, but it doesn't start with companies who chase wealth for wealth's sake, nor does it start on the backs of the already overworked working class, or with companies already falling into the hole as they lay off workers who are necessary to the stability of the infrastructure within those companies and outside of.

Do not allow this to move forward if you value our country and its people.
