General Comment

As a writer, I am horrified at the rise of "generative AI" and fear for the future of this country if every citizen is sacrificed and fed into the regurgitation machine that spits out a false, flat pseudoreality. AI will be the death of Intellectual Property in every way, and will harm anyone who has ever created anything more involved than a grocery shopping list or mindless doodles.

AI does not "learn" from the texts and images it's fed, it just shuffles it all around and predicts what the likely next word or pixel in the series should be. For anyone who values copyright, or who benefits from owning intellectual property of any kind, will lose if much stricter barriers are not erected around the so-called "artificial intelligence" systems.
