General Comment

I am extraordinarily dissatisfied with AI being forced into everything. AI makes my work more difficult. AI offers no value whatsoever to education or writing. Americans should be protected from the inundation of AI into everything. It should not be forced into all of our software. Additionally, legal copyrights should be honored, and the illegal theft of written or visual information to "train" AI should be penalized by the strictest measures. Americans have been greatly abused by the government's allowance of this theft. Similarly, Americans have purchased software that has become unusable due to the forced implementation of AI within the software. Generative AI has never been designed to be factually accurate, and it is beyond irresponsible for any business, government office, or classroom to use generative AI as if it were capable of distinguishing fact from fiction. Even on a creative level, AI operates based on the most common patterns, producing the opposite of creativity. We do not need or want these plagiarism machines spitting out biased mediocrity to be determining ANYTHING AT ALL for the American people. Protect and defend copyright laws. Error-ridden pattern-making machines have no place in management, education, or business.
