Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6352

Comment on FR Doc # 2025-02305

Submitter Information

Name: Lennon DeLeon

Address:

General Comment

While I completely understand that AI technology has the potential to completely revolutionize agricultural, medical, and industrial fields, with where that technology is at now I cannot support this proposal which will give completely unrestricted data access to AI companies who have no interest in advancing AI for the good of working citizens.

Specifically, Generative AI has no place in society, as it merely serves to steal and discredit the hard work of artists and creative innovators all to simply peddle the promise of more 'content' for the naive and uninformed.

For as long as intellectual property has been recognized as something unique and valuable, the law has put protections in place so that brilliant minds can be rewarded for thinking up what was thought to be unthinkable, to innovate on things thought to be concrete and stagnating, and for taking the steps to actualizing their ideas with their mind and body. Generative AI disrespects the history and virtues of our intellectual property laws, all in the name of capital profit. Even worse, this 'profit' fails completely to compensate those who are contributing to the arts and academia - sometimes for just the joy of creating - and merely goes to lining the pockets of people who fail to understand the creative process or simply care not for anybody but themselves.

Generative AI is fundamentally built on theft, and therefore if it cannot exist without stealing, then it should not exist at all.
