General Comment

The professionals of the creative industries have been devalued to such an extent that Silicon Valley companies never thought that they would have to ask to use our works. Even though artists and writers are not valuable to them, artistic work seems to be vital. Please to not validate their theft after the fact. Copyright is a bedrock principle that encourages artists to create and participate in building our culture and society. Allowing tech firms to raid our work freely will incentivize the privatization of creativity, and ultimately hurt the future of the arts. A machine can only imitate, it can never innovate. Without a space for human-based art, innovation will end.
