General Comment

I am deeply concerned with the security of my words and images online if openAI is allowed to feed copyrighted content into its algorithm. While I do think that there are practical applications for LLMs, areas like the creative fields, or answering questions with composite information divorced from its context are actively regressive pursuits and should not have free reign of all data. The material that it generates is also, more often than not, bad and quickly becoming homogeneous as generated content is also scraped from the internet and fed back into the algorithm. Contrary to its misnomer, these algorithms are not independently intelligent and provide a redundant service that working people already provide to a greater degree of accuracy and quality.
