## General Comment

I'm a writer by trade, and I do not want my writing scraped by generative artificial intelligence. Gen AI is purposely trained on the work of those who have already done the work. This deprives us of the credit for our work, and steals and distorts what we've written. So much so, that gen AI often hallucinates.

This is dangerous, as it can lead people to incorrect conclusions. All the while, our work is used for the basis of a prompt. We don't want to have our work used like this. It deprives us of work, and gen AI will be used to deprive us further of gainful employment.

Particularly for freelancers, like myself, it's already difficult to compete with generative AI, as many companies see it as a "quick fix" for writing. This encourages the stealing of work, not just employment-wise, but also stealing the work we've already written.

This technology needs to be greatly regulated, and LLMs and gen AI should not be allowed to train on already established intellectual properties, as well as individual writing from authors around the country.

There is no need for this technology to exist. It makes using the internet worse, prevents writers from finding work, and is an overall detriment to the intelligence of the American public. When I say I'm scared of future generations growing up with this technology, I'm serious. They're being taught to not think critically, and rely on answers that may not even be true or, worse, hazardous and/or deadly. This prevents the American public from being able to excel in many ways.

Therefore, I ask that large language models and generative artificial intelligence be subject to regulatory guidelines. It poses great and detrimental effects to the US public at large, but more so to those who make their living with the written word.
