General Comment

The best Action plan around AI is to nuke it from orbit. It's the only way to be sure.

Does that sound familiar? Like copyright infringement? then you're familiar with what AI is - a serial thief of content that isn't even able to guarantee accuracy in its response - I like Cory Doctorow's description of AI as a 'stochastic parrot' regurgitating the most common answer, whether it is correct or not.

It takes more resources to provide worse quality, but because it externalizes the costs, companies think it's a boon.

Besides the millions of people who have had their creations stolen, it offers the ability to provide fake results (either intentionally or not - both of which are terrible for our country).

The only action plan toward AI the government should implement is holding these companies to account for all the copyright and trademark violations they have committed, and maybe investigating their accounting to see where all the so-called money really is. Maybe listen to a little Ed Zitron and Cory Doctorow to get a sense of what the real scam behind AI is and do something to head it off before it joins the other catastrophes that are currently sending our country down the drain.
