General Comment

Companies should not be allowed to steal from creators of any kind in order but especially not to train their AI. To call what exists now AI is actually ludicrous and there is currently no problem that it can actually solve beyond spit out a bunch of rehashed info that already exists, often with incorrect information. Giving it more info will not improve the tool. Unqualified support of AI already has ill effects: without people thinking through solutions, we cannot arrive at correct solutions. Critical thinking skills will continue to atrophy is AI is presented as an answer giver. It does not give answers but rather supplies information that again, is often wrong to some degree. When investors realize that AI is not giving them a return on their investments, they will be angry and slow to adopt new technologies that will actually be useful.
