Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

Good Day,

Due to the alarming series of lies and manipulation being employed by tech giants like OpenAi, Meta, Google, And Microsoft, to try and destroy individual copyright protections I feel the need to respond.

Be It no surprise to any reading this, I am an Artist. As such one of the criteria of being an artist, simple but required, is that I am Human; I am Sentient. I am afforded protections of my work because of this, and because the government, MY government of The United States, along with every other government who signed Berne, realized that creative and technical fields would collapse without international protections. And, while I am unable to find work without signing away certain rights to my work to a production company, I have -never- signed away the right to be replaced by clones of my work or for the rights to my personal work which I show publicly to friends and family to be torn from me. Such a thing would be a figurative, and , eventually literal, suicide.

On the surface, the technology seems impressive, and frankly, the idea that an algorithm largely designed to address non-equilibrium thermodynamics data, is something to applaud. As someone who has a minor background in programming, and working in software development for decades now, I can appreciate the feat. Tech is a great feat of human ingenuity, and in general isn't to be feared as long as we do the right things with it but sacrificing human creativity, human interactions, human intelligence, for the mind-dulling effects of generative models, is not the way to move forward.

These companies want to promise infinite money that will never come, and has failed to manifest such a thing in the past two decades from Web3, Crypto, NFT's, the MetaVerse, all of which lead to very obvious Ponzie Schemes, RugPulls, and Snake Oil.

The fact is, while there are some uses for what is being termed "Ai", none of the actual helpful fields Require the theft of creative and personal creations and speech by others. Yet for some reason its the only thing they can seem to think of when trying to market their product with ad's like:

-Deep faking images to lie to your boss that you're going to be late.

-Stealing code from websites that dedicate their hard work and time to trying to produce educational resources which in turn keep the site itself alive and available.

-Stealing headlines from news sites , and returning them Incorrectly 60% of the time, both misinforming the public and preventing a very Vital part of our ability to have freedom of speech and information.

-Generating a wall of filler text to pretend to be knowledgeable about a subject.

Generative “AI” software is no more than a fancy set of filters built off the derived value of others works. Its accurately been described as a compressed search engine in the case of written text, images, and video. One could not realistically say that Google Search was “learning like a human” in any serious regard when they used SEO to make searches more reliable, nor could they claim Google has copyright over the things produced from those search results. Yet here Google and others want us to believe that they should own what they have taken simply because it can remix those results at recursively random intervals?

Gutting the protections on creative and human works would destroy any incentive for creative or human works of any real value going forward. This fact is explicitly WHY we had copyright protections in the first place. Its anti American to presume that we should steal from everyone and hand their futures to a handful of tech companies who are only doing it for that money and just have to keep lying about what the end stage will look like before they make a swift exit.

What the government needs to be doing is forcing transparency with EVERY tech company claiming to have an Ai, forcing them to reveal sources, chain of ownership of that data, and ensuring that Americans and even our allies are protected from a ring of tech thugs looking to betray us the people, and you the government, the moment they feel it serves them monetarily.

Do not make one of the largest mistakes in human history here.

Thank you.
