## General Comment

Unless the use of generative AI can be regulated and proven ethical to use that doesn't infringe on the copyrights and trademarks of others and Individuals work, I cannot support this act. This goes against all artists from our modern day to in our past, Including but not limited too, game designers, animators, painters, sculptures, digital painters, photographers, videographers, alternative medium artists.

Allow AI to aid us where it is actually needed, like medical, engineering, weapons, military and automobiles for example. Not where it hinders creatives and does not solve any current problems, only to evidentially create more.
