General Comment

I am a writer, poet, and small business owner who has copyrighted material available on the web. Any AI policy created by this RFI needs to ensure that writers have an easy method for authors to indicate that they don't want their material used in AI models, and similarly an easy way to discover and remove material from existing models. Without a way to exclude copyrighted material from an AI model, the US government will essentially be saying it's okay for companies to steal intellectual property. What is the point of having a copyright if this type of theft is permitted? When creating their plan, NITRD NCO must take the rights of copyright holders into account and protect us from AI companies.
