General Comment

As an artist, me and my community do not approve of machine learning (falsely advertise as AI) tools being used as a way to launder copyright protected artwork, that was taken and used to train these machines both without original authors' consent nor without a care for the fact that this essentially counts as stealing, in order to create an appearance of originally generated content that then they themselves can profit from. People running "AI" models should not be given any more freedom than they already have to scrape data from the internet and use it as they please without any tangible hindrance. Not only this is creating a major ethical problem, the so called AI tools are not effective to begin with and they consume way more financial resource, electricity and storage space than they ever produce anything resembling a passable result, even as tool that essentially regurgitates stolen data and recombines into something seemingly new. Generative AI does not benefit anyone else, but the con artists, who use to for quick easy money, scam and impersonation, all while not caring for the damage to both the parties they scam, not the parties that has to maintain all that ineffective infrastructure for the scam to even work.

I do not wish to see a world, where con men are given permission to create tools, that they falsely advertise as not what they actually are, that make their scams even easier for them, while the burden of expense falls onto literally everyone but the bad actors. Do not give freedom to AI model developers to just take whatever data that they thought they had right to take, as many of said data is a property or work of actual real people that is being abused, altered and profited from. If they need data to train their tools, then either they have to create their own or be required to secure the right to use other's, no matter what cause they advertise.
