

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-0a1q-xhr6
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6466

Comment on FR Doc # 2025-02305

Submitter Information

Name: A S

Email: [REDACTED]

General Comment

While I understand the desire for innovation and progress in the field of artificial intelligence, I firmly believe that AI also creates serious legal and ethical issues, ultimately undermining the creative rights of individuals and organizations.

Copyright laws are fundamental to protecting the intellectual property of creators, ensuring that their work is not used without consent or fair compensation. These laws are in place to incentive the creation of new ideas and artistic expressions by providing creators with exclusive rights to their works. Immunity from these laws would not only violate the rights of individuals but could set a dangerous precedent for how AI-generated content is treated in the future.

OpenAI, as a leader in AI technology, is well aware of the growing concern around the use of copyrighted material in training AI models. If OpenAI were granted immunity from copyright infringement claims, it could open the floodgates for the widespread exploitation of copyrighted works, including but not limited to books, music, images, and other forms of creative output. This would not only undermine the economic interests of creators but also erode the integrity of creative industries that rely on copyright protections to sustain their livelihoods.

The question of whether OpenAI's models could be used to generate content that infringes on the copyrights of others is a pressing issue. Immunity from copyright infringement claims would absolve OpenAI from any responsibility for potential misuse of copyrighted material, enabling the proliferation of content that could easily violate intellectual property rights without consequence.

This potential lack of accountability could create an environment where creators, both large and small, are disincentivized to continue producing original works. If AI systems can simply generate content that mimics or reproduces copyrighted works without facing legal repercussions, it could undermine the financial stability and artistic innovation that copyright laws aim to protect.

While AI has the potential to transform industries, it should not come at the expense of the rights of creators who contribute to the richness and diversity of human culture. The law should ensure that AI development does not encroach upon or exploit these rights, and that companies like OpenAI remain accountable for how their technologies are used.
