## General Comment

Hello — I'm a mid list author and an American who truly believes that the work of our creative community is worth protecting.

The AI systems made by Big Tech companies like OpenAI (Microsoft) and Google threaten to destroy thousands of American like me with their recent demand to create special carve outs in copyright law.

AI systems can only be produced by first training on work made by people. My unique work, and the work of hundreds of thousands of other everyday American creators was taken and fed into these AI systems without our consent or any compensation. My own books have ended up on lists that were used to train systems illegally. They ingest our work, reassemble it, and then sell it back to our clients — directly competing with us and cutting us out of the marketplace.

Now these Big Tech companies are asking this administration to create exceptions and loopholes to make this practice of stealing American creators' copyrighted work legal precedent. They are suggesting that if a machine ingests and reproduces copyrighted work, it is somehow suddenly "fair use".

They seem to believe that anything and everything on the internet — regardless of who owns it — should be theirs for the taking. They claim that if this administration does not allow them to rewrite the law in this way, it will stifle American innovation.

Instead, it will have the opposite effect. The purpose of American copyright law is to protect the incentive to create and innovate.

If we the American people do not own our creations, and everything we put online will be stolen by Big Tech giants, what will be the incentive to create? If everyday Americans create a new innovative piece of computer code, a new visual design, or a new piece of music only to have it immediately stolen by Google and Microsoft, why bother creating it in the first place? How will we possibly make a living doing these things?

Want to protect American innovation? Protect American creators. Do not create new copyright exemptions that allow Big Tech companies to exploit and steal from creators and everyday Americans without permission, compensation, or transparency.
