Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6481

Comment on FR Doc # 2025-02305

Submitter Information

Name: Rob Colvil

Email: [REDACTED]

General Comment

So-called "artificial intelligence," misleading as the name may be, is terrible. It is terrible in every way. I'm an artist, musician, and writer, and all of these pursuits are threatened by the senseless spread of this algorithmically-generated slop. Not only is it embarrassingly bad at what it claims to do, but it is also exceptionally wasteful. The amount of energy it takes to generate this garbage is baffling as it is destructive to the environment. It harms artists, it fills the internet with meaningless clutter, and it wastes resources. If the aim is to use this facsimile of creativity to put actual creative people out of work, that has a ripple effect throughout the economy. It makes searching and using the internet much more difficult, discouraging use of the greatest technological achievement of the last thirty years. It's a stagnant pond of polluted water, which is a metaphor that I, a human being, thought up, and can unpack and explain because it actually came from thoughtful analysis, not a statistical model of language that only superficially resembles communication. Any belief in "AI" is magical thinking, a desire to expand it is reckless, and to do so at the expense of actual artists is insulting.
