Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6483

Comment on FR Doc # 2025-02305

Submitter Information

Name: Tyler Holmes

Email: [REDACTED]

General Comment

Artificial intelligence is a still developing technology which already incurs incredible costs in its inaccuracy (https://www.cjr.org/tow_center/we-compared-eight-ai-search-engines-theyre-all-bad-at-citing-news.php), energy usage (<https://www.nytimes.com/2024/07/11/climate/artificial-intelligence-energy-usage.html>), and dependence on human work. Though proponents suggest AI might offer incredible benefits to society, AI merits extensive regulation. It is not in the interests of the United States or human kind in general to offer the tech industry writ large, and AI companies specifically, special support or treatment.

AI companies should follow existing law and respect the incredible creativity of writers and artists (by either paying for/licensing their works or not using them). In addition, AI companies should have to demonstrate how their products actually move mankind into the future rather than recreating biases of the past.
