General Comment

I have witnessed and heard of so many cases of an artist's art being deliberately fed into an AI model in order to claim the subsequent output. I've heard stories of a writer's work being fed into ChatGPT and plagiarized. I've heard stories of companies laying off their employees due to seeing AI as the cheaper, easier option, only to regret it after-the-fact as their productivity is nowhere near what it'd been without their previous workforce. I've seen much misinformation spread through Google's own AI as well as OpenAI, especially in the concern of medical misinformation, which could get good people killed.

There is a option on Twitter to quite literally feed any image you see into Grok, their custom AI model; this can be done, theoretically and likely has been, with copyrighted material and be claimed by the user in question as their own when it is clearly not.

To enact this EO is to enact a slow death in the life of creativity, productivity, and the ability for every day Americans to be able to protect what they have created in the face of an ever-growing line of AI models being produced by corporations and people with questionable morals in the face of making a dime.
