General Comment

The current generation of privately-owned technology referred to as "AI" is infinitely more harmful than beneficial to the United States due to the lack of intelligent regulation and protection from foreign influence. Any policy put in place should:

1. Prohibit ingestion of unauthorized copyrighted materials into AI datasets. It has been proven both in studies and personal use that the current version of "Gen AI" can and will directly plagiarize copyrighted works. By design, it is regurgitating material entered into it, and therefore cannot legally operate within the US copyright system without first obtaining authorization from copyright holders for the reproduction of their work.
2. Prohibit "hallucinated" output that is libelous, dangerous, or used in place of a trained human professional where doing so may lead to harm or loss of life. Examples of such dangers include news reports of "AI" publicly accusing investigative journalists of committing the crimes they investigated, "AI" instructing users to add glue to pizza, "AI" being used to deny insurance claims in place of a doctor, or "AI" salespeople offering perspective buyers free vehicles against the wishes of the dealerships.
3. Prohibit environmental and personal property damage or eminent domain for the creation, powering, or maintenance of "AI" data centers that will be used exclusively for private profit.
4. Prohibit use of "AI" to create deep fake videos or images that are harmful or criminal, including false videos of politicians and perverted videos of living adults and children.
5. Ensure all US-authored "AI" is protected from and verified to be clear of manipulation from hostile foreign governments and malicious actors, both at the code and data set levels.

Without these things, the United States has already "lost" the AI battle, as the output of our current models is so faulty and poisoned as to be useless for both private and government use. It cannot reason, it slows productivity, it corrupts existing information, it sews public distrust, it empowers criminals, and it burns resources. In other words: it is snake oil.

Thank you.
