General Comment

Innovation is meant to transform and change, and this approach to AI only ensures everyone will get more of the same while hurting the people who have something new to say. AI will not be the death of art, art is human and we'd have to be extinct as a species before that ever happens. But, this just ensures it never reaches its full potential, where old voices are disrespected, new voices give up, and emerging voices don't even get a chance at the starting line either due to lack of incentive or lack of practice. Requirements, rules, regulations, whatever word you'd like to use for the things you believe are hindering you, have consistently been the reasons innovation takes place. This ensures that the perception and execution of AI will only become negative quicker than it already has, and will leave everyone, from artists to stakeholders to newborns, worse off.
