AI Action Plan_LL-Squared LLC

March 15, 2025

Laura Longwell
President, LL-Squared LLC

Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

LL-Squared LLC is an American small business publisher that has been devastated by the actions of multinational corporations like Google and is concerned that this AI Action Plan will enable the further harm to hundreds of thousands of American small businesses.

The owners of LL-Squared LLC and its employees urge the National Science Foundation and the White House to protect American interests and not erode U.S. copyright protection for the benefit of multinational corporations with their foreign founders and executives – individuals who present a national security risk to this great country.

Specific comments to the proposal:

1. Protect Copyrights for Americans

Since George Washington enacted the first copyright law in the United States of America, our protections for created works have been the model for all countries around the world. Now is not the time to change that.

Artificial Intelligence (in general) and Large Language Models/LLMs (specifically) are only as good as the datasets that they are trained on. That simple fact forms the basis of the request from Google and OpenAI to eliminate copyright protections in the United States. HOWEVER, there is a foreseeable consequence.

By eliminating copyright protections for creators, you destroy the integrity of the datasets as independent publishers remove their work and stop creating new articles. It is a short-sighted cash grab by foreign executives at the expense of hard-working Americans.

2. There Should Be No Expansion of Fair Use Doctrine

The pretext for these changes is the “fair use doctrine.” However, this forum, the Administration's AI Action Plan, is not the proper venue to litigate changes to the Fair Use Doctrine. The courts are.

Instead, foreign technology companies want to short-cut the process of cutting out American oversight for their foreign activities and eroding American's rights in the process.

3. The Companies Lobbying for Weakened Copyrights Represent a National Security Risk

The technology companies lobbying for weakened copyrights themselves represent a national security risk. While nominally headquartered in the United States, these companies are essentially foreign entities: founded by foreigners, lead by foreign executives and foreign nationals, and using a vast array of employees in countries that are not aligned to America's interests. They are "American" in only that they trade on the U.S. stock exchanges, but do not represent the national interests of the United States of America.

The AI development teams for these companies are based in China, India, Russia, Egypt, Ukraine, and other countries that are not our allies.

These companies are requesting the Administration grant broad exemptions to U.S. laws and place that trust in the hands of these foreign nationals who have no allegiance to the American people.

4. Control and Censorship are the Likely Outcomes

Since its creation, the Internet has been a powerful tool for the communication of ideas and a repository or "global library." However, by controlling both what information gets absorbed into LLMs and the informational output from LLMs, these tech companies can assert a total monopolistic control of what information gets consumed. Complete control of people through the information that they consume.

This is both information control and censorship. If we have learned nothing over the last decade, censorship of information is not in the ultimate interests of the American people or our government.

In conclusion, we request the National Science Foundation and the White House to create an AI Action Plan that actually protects America's national security interests by not enabling these foreign nationals to disenfranchise American authors and small businesses.

Thank you for the opportunity to comment.

About LL-Squared LLC:

LL-Squared LLC is a small business engaging in the publication of travel and entertainment information across multiple websites. [Travel Addicts](#), founded in 2008, is one of the oldest independent travel blogs on the Internet providing real, unbiased information for travelers. Launched in 2020, [Guide to Philly](#), provides local ideas and information about Philadelphia, Pennsylvania.
