General Comment

I do not believe AI holds a place in the future of the US. AI steals from my livelihood as an American and profits off of theft as AI is overhyped and is fleecing the eyes of the American public. I refuse to consent to having anything especially photos and art being used for any AI tools. AI is unethical and harmful to everyone as many Americans agree that AI holds no value or place in the US or anywhere in the world and should not be encouraged as it is harmful to our society. AI is a speculative market similar to cryptocurrency and NFTs, with false promises to fool the public and huge legal problems by enabling them. There is a lot of huge data security concerns regarding AI as AI won't protect your information and will make it easier for anyone to hack into and snag your personal data and information. AI is also harmful to the environment as the proliferating data centres that house AI servers produce electronic waste, are large consumers of water, which is becoming scarce in many places, rely on critical minerals and rare elements, which are often mined unsustainably, use massive amounts of electricity, and spurs the emission of planet-warming greenhouse gases.
