General Comment

No AI software should be legally permitted to access the proprietary creative output of human beings. Their creative work is often their primary means of survival, and allowing AI software to steal their creations is clearly a step toward destroying the lives and livelihoods of millions of talented Americans. It would also be a mistake for the long-term viability of generative AI. Without steady input of original creative content, AI systems would quickly start digesting other AI content, steadily degrading the output and rendering generative AI utterly useless.
