

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-0dux-l3fy
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6561

Comment on FR Doc # 2025-02305

Submitter Information

Name: Shirley Zhu

General Comment

The United States needs to better regulate the use of AI to ensure quality. Time and time again, we've seen that less government oversight in the private sector results in cut corners and mistakes that have turned deadly at the cost of the American lives. There is already little oversight in how AI developed and used, which results in mass-produced, cheap, bad quality product that's worth less than the energy used to generate it. For example, I recently googled "how to cycle a fish tank" and the first few pages of results were polluted with the same generic AI-generated information that was of little help and wasted my time. Now, I have to search for forums or for things specifically published before AI language models became widespread just to know that an actual person wrote the article, at the cost of outdated information that could be wrong now. What if that same search was for how to handle a medical emergency while the ambulance arrives? The technology should make life easier and be optional, not force people to waste their time separating the good information from the rest.

Intellectual property should also be legally protected, not removed. The lack of it disincentivizes innovation, not only in the technology sector, but everywhere. If the government can't guarantee protection for an individual's creative work, then what makes us different from a socialist country? It's an open invitation for brilliant minds to move elsewhere, where their intellectual property and hard work are valued instead of taken. AI generated "art" has already replaced some creative work, putting people out of jobs or resulting in the expectation that creatives work for less than minimum wage for skills that took a lifetime to build up. Science and technology might be the backbone of our nation, but creative work is the living soul and America would not be the same without it.
