Software Developer

Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I am a software developer with three years of experience across two jobs, so my understanding and stance on AI comes from less of a creative-driven industry and more of a technological industry, and it is my understanding that allowing AI technology to run off of copyrighted work doesn't only compromise creative-driven jobs, but also compromises workplace security, all for a results that are insufficient.

Much development tools have begun integrating AI-driven development, including companies such as Salesforce, and Atlassian, whose tools I've used as part of development, such as Slack, Confluence, and Jira. These companies have begun integration of AI, which means products I've begun work on are already having their data scraped, when they haven't even been made publicly available. Granting AI free access to copyrighted materials means that if someone uses what AI has scraped to publish a tool, than the companies I've worked at are now in danger of their product being released by someone else before they're even able to. This puts the world of technology in danger.

Please do not allow AI to use copyrighted data. It will cause more harm than good.

Thank you for your time,
-Anthony Fairfax
