General Comment

As someone with a Ph.D. in Computer Science, it has been truly shocking to see how big tech has pulled the wool over the public's eyes with regards to Generative AI. Generative AI has been oversold and and it has drastically under-delivered. There is no product.

There is no reason for AI training to be exempt from legal copyright restrictions. AI is profiting off the backs of hard-working Americans at no cost. These large companies, like OpenAI and Google, are aware that they are stealing and this is why they are pushing for deregulation. If the shoe was on the other foot, they would sue individuals into the ground over this.

We are due an inevitable economic crash over AI, and this is an attempt to offset that. Continuing to push this off will just deepen the damage. Hold AI companies accountable, pay workers a fair wage, stop gutting the American Economy for a fraud.

It is obscene these companies ask the US Government for \$5 Trillion on one hand, and then beg to be able to steal data on the other hand. Meanwhile, they cry fowl when AI output is used to train other models. You cannot have it both ways.

If anything, there should be further regulation and restriction on AI to prevent it from causing the kind of damage it has already caused to our economy. Training these models for academic purpose has always been fair use, but pretending that trillion dollar companies are being "disadvantage" because they might have to pay for use of data like everyone else is disgusting.

I urge the rejection of all of these proposals. Let artists and creators own their work, as has been the precedent for over a century.
