## General Comment

AI should not use our personal information nor should it use copyright information that would infringe on the rights or creativity or human creators. It should only be able to access items in the public domain if that.

I am frankly very concerned about the proliferation of AI before it is fully tested and I am concerned about the energy and natural resources needed in order to run AI.

AI seems to be something no-one asked for, and is being pushed upon the public so that tech companies can make money.

I think they should take the time to develop it in testing and not on the public, and once there is a true use for it, and the resources needed to deliver it has been vetted, then it should be released.

I am also concerned that the tech companies that are releasing AI products are using public energy and resources to profit. The tech companies should foot the bill for the energy and water at a higher rate than citizens, as we do not want to draw resources away from everyday citizens to fuel the data centers needed to run AI.
