General Comment

This AI Action Plan should be cancelled because there is no such thing as "unnecessarily burdensome requirements" to AI innovation, and the requirements that private sector companies claim to be hampered by are things like "ask for consent to use artists' and writers' works to train your glorified autocomplete instead of committing mass theft of intellectual property". AI in its current form is powered by mass theft and is incredibly destructive to the environment because of its excessive power and water consumption required to operate the computers for what is ultimately just a glorified algorithm and not true artificial intelligence. The development and innovation of generative "AI" needs **more** regulation and requirements, not less. It's an industry built on theft of people's works, jobs, and public resources.
