General Comment

I am commenting to say that the use of AI is not only unhelpful for future success of the United States, but it is actively harmful. AI in its current and proposed optimal state has not proven to help US citizens in any meaningful way, that funding of proper resources and departments wouldn't do. In fact, it has proven to be less helpful than those with basic knowledge of the subjects it pulls haphazard data from anyway.

This is not only considering the fact that the tech required to run AI is harming our environment at an alarming rate, that we won't have time to recover and use the tech if we can't maintain a place to live in first. AI has no place in anyone's future and giving those in charge of it free reign will help no one.
