General Comment

AI is a very powerful tool that can really revolutionize a lot of industries, but is also very dangerous to many different industries. AI endangers not only the environment due to the amount of water and energy it uses, the the jobs of many hardworking Americans, the IPs of many companies and is especially dangerous in many of the forms its being used in. There area already so many industries where AI has failed and has the capacity to cause immense and irreparable damage, such as in the health field. We don't need less restrictions on AI, we absolutely need more of them.
