## General Comment

Allowing companies like Google and OpenAI to freely scrape and use any material they wish to train their AI is tantamount to theft. If the United States government they will be complicit in this theft. It has been shown that an AI can not replicate imagery that it has received no examples of, to the extent that they cannot generate an image of a watch at with different hand positions. Any image it generates relies on the material it takes as input. It cannot create anything new, it is simply an advanced collage generator. Because of this reliance any company, or anyone training an AI, should be made to pay for the materials they train on.
