General Comment

As some who Jason both their main and side income under threat due to the advancement of GenAI (I call it GenAi to seperate it from the concept of actual artificial intelligence), I hope the people elected to represent us will have our ability to work and provide for ourselves more protected from a technology that is decimating workforces, both creative and non, across the nation. Tens of thousands are struggling to survive because companies so more worth in saving money with sub par technology than investing in workers with talents and experience that GenAI could never comprehend and achieve.

GenAI companies have successfully lied about the capabilities of GenAI, and what it is at its core. It is an advanced agrigator, which means it can only collect from information already out on the internet, which means it is vulnerable to incorrect information and the bias of whatever data set its pulling from. This can lead to dangerous results as more people take it for gospel than learn how to properly research and educate themselves on the matter.

GenAI must not be allowed free jurisdiction when it comes to finding information for its data sets. The right of people to claim their work as their own should not be set aside for people who aim to destroy entire industries for money. I hope our representatives have we, the people's, best interests at heart and do not side with invasive technology trampling over our ability to work and enjoys our hobbies securely. We are not farms for machines to take everything we make and spit out a worse copy, especially not for free, and not without the threat of legal action to keep such insidious technology in check.
