Email: [REDACTED]

General Comment

Training for Generative AI models must respect current copyright laws in order to protect IP holders and their creations. Training on copyrighted material without proper consent from the copyright holder is a clear violation of copyright law.

While I am for the removal of unnecessary burdens and regulations in order to let the innovation of the technology sector flourish, I also do not want to see the hard work and protections of IP holders be violated for the sake of Generative AI. A proper solution to the training model issue would be to require AI companies to provide their own training datasets--in other words--hire a team and go out to take photos in the field or pay volunteers to make contributions to your datasets.

-Matthew
