General Comment

businesses have laws regulations and support to prevent other companies from taking and monetizing ideas they made or make. allowing this is pass allows the strongest companies to take private sector ideas innovations and work and use it to create or steal ideas from this sector, monetize them, and claim them as their own. this will only create a need for businesses to then protect their ideas from this idea theft technology, only leading to further theft, and a system that cannot be regulated. left unregulated, only entities with enough money to both profit and fight the misuse for themselves will succeed, leading to a farther fall from an every day working man or woman from being able to innovate, solve problems, or create new products, since they can no longer claim them as their own, as the mention, show or sight of their fruits of labor will become the seeds of anothers without compensation. furthermore it creates a monopoly of any systems currently in place as if idea theft is worked around in this manner only benefit users who can afford any fight in the first place, meaning outside of extreme wealth, corporations are the only ones who can make and create, stifling all other sources of it.
