Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6676

Comment on FR Doc # 2025-02305

Submitter Information

Name: K S

General Comment

I do not support loosened restrictions or regulations for artificial intelligence. Carving out a copyright exception for AI harms businesses, artists, consumers, and the planet. Keep AI regulated.

AI steals copyrighted works.

For businesses this means loss of profits on copyrighted works and increased legal fees incurred when protecting their works.

For artists, this means loss of work and profits, as well as undercutting when an AI replicates their individual style of work.

If AI is unregulated, it will eat itself and drown markets with s&^%. As it stands, AI hallucinates incorrect information and creates &^% knockoffs. As AI incorporates other AI generated materials into it's models, it will exacerbate these problems and flood markets will worse and worse garbage. Consumers will become inundated with untrustworthy and &^% products. They will stop spending money,visiting websites, and engaging as it gets worse.

The amount of resources AI requires also hurts everyone. It vastly increases demand and cost of energy - especially now as tariffs increase energy costs imported from other countries. And it also contributes to our worsening climate crisis through its energy use footprint.
