General Comment

AI developed without consent of the creators of the work used is theft--we are stealing livelihoods from authors, artists, scientists, journalists, and more. Any regulations on AI need to include protections for those whose work is used to prevent it from being used without consent. Copyright infringement is illegal, including for use in developing AIs, and the US must keep it that way.

I am not sure why the current administration regards the development of "Safe, Secure and Trustworthy" AI to be a problem, but regulations are necessary to make sure that we are considering the ethics of AI before plunging in blindly and ruining the incomes of thousands of people.

We have seen also numerous problems with the development of AIs that bring the biases of the human creators with them, and it is incumbent on us to make sure this is addressed in any AIs being developed in the US.
