General Comment

Allowing copyright law to be skirted by companies for AI development has already been shown to be a disaster by the amount of derivative and borderline illegal content being shown to children on platforms like YouTube and TikTok, while I personally care little about shareholders, as a party who largely takes influence from corporations, you should plainly see that this would only further to anger them, allowing anyone to use this software to not only steal the works of individuals, but full fledged copy written properties, effectively making the entire idea of copyright for artistic work useless. This would be a killing blow to art of all kind across the internet, and frankly I wouldn't be surprised if that was the intention of such a blatantly poorly thought out proposal.
