General Comment

"Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence" is still necessary for our nation! We need good, effective AI tools based on high-quality, accurate content provided by reliable and properly compensated creators who consent to each and every part of it. Even with previous protections in place, AI has been generating unsafe search results for food recipes, household product chemical combinations, and other basic human-performed tasks, for example. And companies like OpenAI already violate copyright law and plagiarize the hard, intense, creative and transformative work that we writers and artists perform. Instead of rewarding them with unlimited access to plagiarize and remix anything and everything, they should be held accountable for what they have already stolen and the damages their negligence has caused.
