General Comment

I'm honestly surprised that OpenAI is asking for unfettered access to copyright material since they've already been (illegally) scraping copyrighted material to their hearts content. And somehow that's still not enough? I'm wondering what is left for them to steal, and why they would need to ask to steal it. What happens when OpenAI has stolen everything that's left? It'll eat itself, creating more and more hallucinations, until it's totally useless. What is the endgame to this Action Plan?

Unless OpenAI is actually a complete failure and Sam Altman is trying to keep the scam going just long enough to get as much money as humanly possible out of it. Which begs the question, why is the US Government working so hard to save a failing business that sucks up more resources than a small city while providing nothing but recycled slop and guesswork. It can't even do simple math at this point.

Ironically, this proposition would also be bad for OpenAI and other generative AI programs, because then others can steal their "work" with impunity, which historically AI proponents really don't like. They hate when others "steal" their prompts - with seemingly no self awareness that they in fact have stolen from artists, writers, and other creatives.

There are good AI programs that are useful, but they have very specific use cases, like the AI developed to identify baked goods in a Japanese bakery that is also good at identifying cancer cells. (Notably that AI program is not 100% capable of finding cancer cells without a trained radiologist overseeing the analysis.) But OpenAI is not identifying cancer cells, or even identifying baked goods. It cannot tell a picture of a honeybee apart from a picture of a baby in a bee costume. I'm all for scientific innovation and exploration - but some hypotheses don't turn out, and should be abandoned. OpenAI has not earned the right to Americans' copyrighted work, and our hard work should not be bastardized for the sole purpose of lining a billionaire's pockets.
