General Comment

Please do not allow stealing of copyrighted material for AI programs. The purpose of copyright is to allow artists to make a living and encourage them to create, as well as later allowing other artists to develop new ideas out of the copyrighted work of other artists. Our founders thought this was so important it was included in our constitution. AI does exactly the opposite. It is incapable of innovation. It just combines existing copyrighted works into an imitation. It cannot produce new ideas or new points of view on existing art. Even more importantly it will destroy artists ability to make a living. Anyone saying otherwise is lying or has no idea what they're talking about. Artists are already losing work because employers who know nothing of art or aesthetic value think AI is an appropriate replacement for artists. This will stop people making new art because they will be forced to find alternative means of making money and all we will have is stagnant meaningless slop that can never grow, improve, enlighten us to new ideas, and can never move us because it will never have had any connection to emotion.

Would you allow AI to take over the job of legislation? It could easily do so. Just as it is imperative for human connection in making the laws that govern us, art being made by humans artists is imperative to the human experience.
