General Comment

Generative AI algorithms are dangerous and should not be given leave to use resources and steal art. There is absolutely no reason we should not be concerned about both ends of this problem, and very little benefit anyone gains from the use of this type of AI. Our plan going forward should be to strictly limit these companies and their programs, not to broaden their access.

First, I want to address the environmental cost. These are resource-intensive processes, requiring more and more servers, which produce more and more heat, and consume more and more water. Climate change is already overheating our planet and drying our sources of fresh, potable water. Anything that we do that increases that consumption of our only livable earth needs to be absolutely necessary- which this absolutely is not. I have never seen any use case for this kind of AI that is nearly as effective as human input, let alone improves upon it. There can be no reason, therefore, to allow this pillaging of our home to continue.

Secondly, the model of generative AIs is build upon stolen material, and it gets worse and worse over time. They cannot create new material, only rearrange what is scraped from the internet. That material is both problematic, containing as it must the worst parts of the human psyche, and stolen. Many of the artworks, pieces of writing, and more that the AI uses to make mashups from are privately owned and should never be taken for free or without credit. But even more than that, as more and more AI-generated content floods the internet, the AIs become worse copies of themselves, degenerating into incomprehensible product as they mix together their own already-mixed copies.

Please choose to regulate AI training materials and limit their usage to reflect this situation. There is no justification for doing otherwise.
