General Comment

An AI technology action plan should emphasize transparency both in terms of training and modeling and rigorous ethical guidelines that punish groups who use generators to pollute communication channels, produce counterfeits, or otherwise infringe on the rights of Americans. Care should be taken that these technologies can never be used to obfuscate legal or moral culpability on the part of their operators.

AI has been a boon to bad actors and transparency to ensure datasets are properly licensed and consensual is as necessary as ever. Scraped training data is obviously not fair use. Generators can be shown to contain their datasets and are not transformative in a literal sense. Allowing tech firms free reign guarantees disinvestment and unemployment in the US's culture and media landscape, the very people being stolen from.
