General Comment

Broadly, AI is an over-hyped, over-funded, money pit with precious little real world application (referring to LLMs, generative AI, chatbots and other such models that cannot exist without training data) that steals from my livelihood as an American and profits off of the theft. The vast majority of the major companies investing in these tools are actively and flagrantly violating not only my copyright over my illustrations and designs, but my privacy, and are contributing to the undermining of this country's national security and the safety of our citizens.

It is already known that the environmental impacts of this tech far outstrip the benefits they bring. To ask for even greater latitude over our intellectual property, personal data, and for the freedom to cause greater harm than ever, goes against what America stands for. It is a grift, a con, and a power grab, because they cannot continue to exist without our art, our thoughts, our feelings and our content. Allowing this out of control freight train to steamroll individual liberties is Un-American and grossly irresponsible.

Major companies, such as Microsoft have already seen the writing on the wall regarding AI, quietly scaling back efforts to invest in it and cutting development programs in favor of more profitable endeavors. OpenAI is desperate to suggest we undo our copyright/trademark protections so a handful of companies can run buck wild across our digital landscape. As a concerned American citizen, I do not consent, I do not condone this, and I do not agree with the multi-layered fallacy that unchecked AI development will provide a "better" or "brighter" future for America.

The American people do not benefit from their empty promises of "if we just had more time" and "if we just didn't have to follow the rules". None of these companies owe any loyalty to this country and only care about impossible growth, and endless profits. Make no mistake, they will bleed us dry and then leave for overseas to continue chasing "growth", devastating our economy, hurting our people and loved ones, and betraying any trust we give.

In suggestion for policy, anyone collecting AI training data must properly compensate people for ANY copyrighted training materials or data. This should also include protections that very broadly state WHEN data is being collected, WHERE your data is stored, HOW your data is being used, explicitly, and clearly lay out an appropriate compensation structure for said data. AI-generated materials must not be copyrightable. Furthermore, there need to be laws limiting the replacement of human beings with AI. Lack of human oversight is a recipe for disaster (ask any IT staffer.)

In short, AI needs some breaks, NOW.
